1 CHALLENGE

The store's existing heating system failed unexpectedly, leaving both staff and customers exposed to rapidly dropping indoor temperatures.

The challenge was to deliver a fume-free, energy-efficient electric heating solution that could be deployed safely within an operational retail space. The temporary system needed to provide even heat distribution across a large, open-plan floor area without obstructing foot traffic or disrupting trading hours.

2 SOLUTION

Within hours of receiving the call, Andrews Sykes dispatched three DE95 360 portable electric heaters to site. These electric units were chosen for their ability to provide 360° heat distribution, instant operation and whisper-quiet performance, which are essential features for busy retail environments.

The installation was completed the same day. Thanks to the heaters' plug-and-play design and integral thermostats, the Andrews Heat for Hire team achieved rapid and even temperature recovery throughout the store.

3 OUTCOME

After a rapid response, the eco-friendly heating hire solution was delivered by the Andrews Heat for Hire team.
